The Best Connection

For the best quality picture, we recommend using HDMI, DVI, or Component inputs when possible. These are the most reliable carriers of high-definition (HD) video signals. While these signals do not guarantee high-definition picture quality, a high-definition signal is connected. Note: not all equipment is capable of these connections. HDMI and S-Video are not capable of HD signals.

1) DTV or antenna (using the DTV antenna input).
2) Cable - Subscribe to HD programming through your local cable company (HD cable box required).
3) Satellite - Subscribe to HD programming through Direct TV or Dish Network (HD satellite receiver required).

Contents:
- Power Cord
- Remote Control
- VIZIO HDTV User Manual, VIP Brochure
- Registration Card

Before You Begin
- Verify all of the contents of your accessory package
- Review safety guidelines in Owner’s Manual
- Place your High Definition TV so that the rear connectors are accessible
- Write down your VW47LF 10A Serial Number (located on the back)

Four Easy Steps

1) Choose items to connect to your VIZIO HDTV
   - Choose ONLY one method for each piece of equipment.
   - Using the colored dots from Step One, follow the row across to Step Two to match the colored dots to the same colored connection method.

2) Choose equipment connection methods
   - Using the colored dots from Step One, follow the row across to Step Two to match the colored dots to the same colored connection method.
   - Choose ONLY one method for each piece of equipment.

3) Select cables and make connections
   - Once you have determined the connection methods from Step Two, follow the row to Step Three to determine which kind of cables you need and what the connections look like on your equipment.
   - Using the colored dots from Step Three, use the appropriate cables and connect your Signal Source and Additional Equipment to the color-coded inputs on your VIZIO HDTV. (Refer to Connection Map at bottom of page)
   - Once connected, turn on your VIZIO HDTV and all your equipment.

4) Use your VIZIO HDTV
   - Follow the programming instructions on the other side of this guide.
   - If you are using an input other than DTV/TV, follow Procedure 1.
   - If you are using an input other than DTV/TV, turn over this guide.

3 WAYS TO GET HDTV

In need of a particular cable to make the connection you want? VIZIO-certified cables are available at www.VIZIO.com or call 1-888-849-4623 to order today.

Programming your TV to Receive and Display Channels: All you need is your Remote Control.

**For Your Information:**
- Coaxial connection (RF connector) is recognized as the threaded connector, commonly called cable, screw on or coaxial connector which carries the image (picture) and sound (audio) through a single cable.
- Composite connection (RCA connectors) is recognized by the three (yellow, red and white) standardized color coded RCA connectors. Yellow carries the image (picture); red (right channel) and white (left channel) carry the sound (audio) of the signal.
- Component connection (RCA connectors) is recognized by the three (green, blue and red) standardized color coded RCA connectors for image (picture) plus the two (red and white) standardized color coded RCA connectors for the sound (audio) of the signal.
- HDMI (High-Definition Multimedia Interface) connection (HDMI connector) is recognized by the standardized elongated D-Shaped connector which carries both the image (picture) and the sound (audio) of the signal through a single cable.
- S-Video (separate video) connection (4-pin Mini-DIN connector) is recognized by the small connectors at the end of a cable with multiple pins in it. This connection carries only the image (picture) of the signal; therefore, there is a need to supply a separate sound (audio) signal by using the two (red and white) standardized color coded RCA connectors.

Displaying Channels from different Signal Sources (External TV Tuner, VCR, Cable Box or Satellite Receiver) through different Inputs.

**STEP 2.1**
Select the correct video input connection. RF (coaxial) connector: Composite Color coding (Yellow, Blue and White)*. Component connectors: Green, Blue plus Red and White* connectors. HDMI connectors: or S-Video (SVIDEO) plus Red and White connection (if applicable). Make the physical connection or hook up.

**STEP 2.2**
Turn on the TV. The Initial Setup menu screen should appear. If this screen does appear, please go to Step 3. If the screen does not appear, please refer to Step 4.

**STEP 2.3**
Select Language: English, Español or Français. Press the LAST key to exit the Initial Setup menu.

**STEP 2.4**
If you have an HD service you must use the HDMI input or Component connection.

*NOTE: Coax and S-Video cables carry only for SD (HD) pictures.

Turn on your Cable Box, VCR, External TV Tuner or Satellite Receiver and you will see a picture on your TV set. If there is not a picture, make sure you have selected the correct input on the TV set.

If the selected input is RF connection, you should be aware that the TV set needs to be on channel 3 or channel 4; or matching the channel which has been selected on the back of the VCR, Cable Box, External TV Tuner or Satellite Receiver, please refer to Owner or User’s Manual of such equipment for details.

If you have an HD service you must use the HDMI (best) or Component connection.

**Step 2.4**
Turn on your Cable Box, VCR, External TV Tuner or Satellite Receiver and you will see a picture on your TV set. If there is not a picture, make sure you have selected the correct input on the TV set.

If the selected input is RF connection, you should be aware that the TV set needs to be on channel 3 or channel 4; or matching the channel which has been selected on the back of the VCR, Cable Box, External TV Tuner or Satellite Receiver, please refer to Owner or User’s Manual of such equipment for details.

If you have an HD service you must use the HDMI (best) or Component connection.

**Step 2.4**
Turn on your Cable Box, VCR, External TV Tuner or Satellite Receiver and you will see a picture on your TV set. If there is not a picture, make sure you have selected the correct input on the TV set.

If your new TV set is now ready to automatically reproduce the best picture quality from the input source (cable box, VCR, antenna) into your home environment, please follow the steps below to optimize your TV set display:

**STEP 1.1**
Connect your signal source (cable box, VCR, antenna or satellite) directly to your TV set. For this example – we will use either Regular Antenna or Regular Cable Service without box) directly to your TV set.

**STEP 2.1**
Press the LAST button to exit the on screen display menu.

**STEP 2.2**
Pressing either the or button, scroll across to the icon showing the little satellite dish or antenna. The next screen will appear showing the Input Selection menu. Pressing either the or button, choose the proper Time Zone for your area. Press the LAST key repeatedly to exit the on screen display menu.

**Step 2.3**
Time Zone; using either the or button, select it, and finally by pressing either the or button, choose the proper Time Zone for your area. Press the LAST key repeatedly to exit the on screen display menu.

**Optional Components**
- ARTICULATING ARM- position your HDTV exactly where you want it, but still within the viewing area. Pressing the or button repeatedly to exit the on screen display Menu.
- TILT MOUNT- adjust your HDTV for the most comfortable viewing position.
- FLUSH MOUNT- turn your HDTV into a work of art in addition to a piece of furniture.

ENHANCE YOUR VIZIO EXPERIENCE
- FLUSH MOUNT- turn your HDTV into a work of art.
- TILT MOUNT- adjust your HDTV for the most comfortable viewing position.
- ARTICULATING ARM- position your HDTV exactly where you want it.
